

Model Validity Measures

Validity Analysis

	CR	AVE	MSV	MaxR(H)	1	2	3	4
1	0.903	0.539	0.618	0.905	0.734			
2	0.895	0.550	0.457	0.899	0.629***	0.742		
3	0.835	0.503	0.584	0.838	0.669***	0.560***	0.709	
4	0.793	0.433	0.618	0.794	0.786***	0.676***	0.764***	0.658

Validity Concerns

Discriminant Validity: the square root of the AVE for 1 is less than its correlation with 4.

Discriminant Validity: the square root of the AVE for 3 is less than its correlation with 4.

¹ Convergent Validity: the AVE for 4 is less than 0.50. Try removing JP2 to improve AVE.

Discriminant Validity: the AVE for 4 is less than the MSV.

Discriminant Validity: the square root of the AVE for 4 is less than its correlation with 1.

Discriminant Validity: the square root of the AVE for 4 is less than its correlation with 2.

Discriminant Validity: the square root of the AVE for 4 is less than its correlation with 3.

HTMT Analysis

	1	2	3	4
1				
2	0.627			
3	0.667	0.549		
4	0.780	0.671	0.758	

HTMT Warnings

There are no warnings for this HTMT analysis.
